

FSC FORESTRY IN THE TROPICS

ANNUAL CUTTING PLOTS

1 HA

After activities in one area, the forest will be left alone and protected for the next 20 to 30 years.

2-3

An average of 2-3 trees per hectare in an FSC certified forests.

In one sector over 10.000 different tree species can be found.

High conservation values are identified in collaboration with key stakeholders.

Allowable cut is determined on ecosystem resilience and species abundance.
